

POSE OF THE MONTH

Padangusthasana/Padahastasana

Pada means foot, angustha means thumb, hasta means hand, so the poses translates to thumb and hand to foot pose or hand to foot pose.

Standing forward bends combine the effects of an inverted pose with those of a forward bending pose, using gravity to help release tension and pain. The combination of inversion and forward bending is a means of toning the whole body, as pressure is exerted on all the endocrine glands. Emphasis is given to the pelvic stretch and Swadhisthana chakra (2nd). Prana is channeled to the lower regions of the body as apana is motivated by the exhale to continue its downward movement.

Many people live sedentary lives and have busy schedules, this encourage both mental tension and physical rigidity, both of which are counteracted during forward bending. At another level, forward bending is associated bowing and humility, an inability to bend forward may indicate a stiff, proud, or stubborn personality. Difficulty bending forward is also associated with fear. Human beings face forward to see the world, dropping into the forward bend to see behind us releases rigidity and fear.

Padangusthasana:

☯ Inhaling step or jump your feet hip distance apart, feet are parallel and lined up with hip bones, fold at hips**, wrap your first two fingers around your big toes, inhale lift your head and heart

☯ Exhale fold forward, keeping your body weight even on your feet, tuck your head in toward your knees. Slide shoulder blades toward hips while broadening your collar bones and lengthening the back your neck. Allow your head to hang down placing traction on your neck vertebrae.

☯ It is ok to bend your knees, as flexibility develops slowly work towards straightening your legs. Drishti (looking place) = Nose (Nasagrai)

☯ Stay here for five breaths, then go directly to next pose:

**In all forward bending postures, care should be taken to fold from the hips, not the waist. As you fold from the hips it will require a little more effort as you are moving more of your body than when folding at the waist. Performing hip flexion instead of spinal flexion in this pose will protect your intervertebral discs. **

Padahastasana:

☯ From Padangusthasana, inhale look up

☯ slide your hands under your feet, palms up, toes touching wrists

☯ Exhale bending forward moving your head toward the space between your knees. Stay here for 5 breaths.

☯ To exit: Inhale head up (abs strong), exhale hands to hips, inhale stand up tall, exhale jump together.

This pose adds the additional benefit to the wrists, counterbalancing the wrists from the upper body weight bearing positions of the sun salutes
Drishti = Nose (Nasagrai)

Benefits:

These two poses play in important role in beginning the process of detoxification. They reduce the accumulation of fat around the waist and abdomen. They work on all the internal organs of the abdomen preventing

and curing stomach ailments and constipation (a major factor in the build up of toxins in the body which can trigger the beginning of disease). Forward bends improve digestion and they eliminate flatulence and cleanse the rectum and anus.

They massage the abdominal contents, especially the liver, spleen, and kidneys are toned, they also massage the gall bladder, pancreas, uterus and ovaries.

A good flow of blood is encouraged to the spinal nerves and muscles as they are stretched and toned, during forward bending asana each of the vertebra are separated, stimulating circulation around the spine and nourishing the spinal cord. The hamstring and calf muscles are stretched, relieving varicose veins and aiding the return of blood to the heart.
